A Guiding Hand

Needfinding Results

Team 8 - Gautam, Sarvesh, Kanav

x

Our Project

We are...

- Gautam Khajuria
- Sarvesh Jayaraman
- Kanav Arora

We're covering...

- Educational AI use in the corporate and educational scene

We chose this domain because it was the most relevant and interesting sector where AI is being used as a tutor.

Our Needfinding Methodology

x

x

Education

We wanted to understand how students dealt with a broad variety of concepts with AI

x

Corporate

We wanted to examine how AI helps workers delve into their job's niches and specialize.

Our Participants

x

Fanbo

An 18yo English Major at
SBCC

Jane

A 20yo Biology student in
the UK

x

Sam

Earth is the third planet
from the Sun

x

Our Questions

What do you use AI for the most?

When you use AI as a learning tool, what are you usually hoping it will help you with?

What features would help you feel more ownership over your learning?

When you use AI as a learning tool, what are you usually hoping it will help you with?

What is a crucial time you used it to help you learn and meet a deadline like a quiz?

What prompts, tools, or features do you use?

The × Interviews

Our Interview with Fanbo at Starbucks

- Fanbo says he doesn't use AI much
- He checks the sources of AI results
- He views AI as more of a tool to find sources than a teacher
- He doesn't believe AI has made him a better learner

Empathy Map

Key Insights

Dislikes writing prompts

Prompt writing needs to be easier or mitigated.

He uses Google Lens for step-by-step math solutions and works backward from them.

AI should stimulate users to discover and research on their own.

He thinks AI sometimes gives wrong information.

AI needs to be easily verifiable and more accurate.

He thinks AI can make learning harder if you overuse it.

AI should be moderated or be somewhat detached from the user.

“A professor helps you arrive at the answer, which makes learning stick.”

“Polite, agreeable AI behavior is annoying and makes it feel less honest.”

“The ‘best’ learning tool should challenge me, not flatter me.”

—**Fanbo**

x

Takeaways

AI is cumbersome to use.

Prompt writing is too much of a necessary skill for AI to be used for learning, leading to frustration and less learning.

AI doesn't *stimulate* the user enough.

AI is too much of a “yes man”, and doesn't inherently prompt the user to figure problems out on their own. It gives answers too directly. It's also not very reputable.

Our Interview with Jane at Starbucks

- Jane's first instinct *isn't* AI
 - He doesn't trust it by default
 - Needs citations as proof
- He's frustrated and self-conscious by prompting
- He feels that you don't actually retain info, and that it's too polite

Our Interview with Jane at Starbucks

- He uses Google Lens to help sometimes
 - Works *backwards* from the solution
- He uses it when he's feeling rushed
- He thinks it should be more of a librarian

Empathy Map

Key Insights

ChatGPT tutoring is what he doesn't like

Effective AI tutoring needs to feel more natural

An AI “report” on a subject led to worse retention

AI can't simply give a report – it needs to work with the user

It's too polite and not challenging enough

AI needs to be less sycophantic and more divisive

AI use derails his chain of thought

AI needs to respond in a manner that supports the users' thought process instead of taking over

“It should ask, ‘Ok, what have you tried?’”

×

“AI just dumps the solution and you feel clever for 10 seconds and then you forget.”

—**Jane**

×

×

Takeaways

AI needs to appear in a way that supports a user's thought process

AI can't simply take over the user's thinking. It needs to prompt and support their thinking.

AI needs to be more natural.

Prompting an LLM is far too unintuitive. AI tools like Google Lens, which use photos, are far more intuitive and should be modeled after.

×

Our Interview with Sam at Cafe

*takeaways/insights/apparatus/person
interviewing*

Empathy Map

Key Insights

Uses AI as a micro-assistant

not as a tutor for learning core engineering content.

Trust is bottleneck

Verifies with Google or own knowledge

Concept maps only

Wants relationships, not step-by-step derivations

Curiosity shuts down

Constant AI use makes learning passive

“Probably some way to
fact check itself, I would
be willing to wait longer
for a more accurate
answer.”

—**Sam**

x

Takeaways

Takeaway #1

Design AI to act like a coach for understanding: give conceptual roadmaps, hints, and relationships between ideas, but avoid doing the actual derivations or full solutions by default.

Takeaway #2

Build trust features into the learning flow. Show where claims come from, encourage quick verification, and reduce hallucinations even if it slows response time.

Results

What we've learned

+

Key Learnings

x

AI needs to be more stimulating

AI is too sycophantic and not challenging enough. It needs to be able to offend or challenge the user. It needs to guide the user through learning, rather than solving problems for them. +

AI needs to be more natural

Prompt engineering and interacting with AI through text is cumbersome and frustrating. Forms of AI like Google Lens are intuitive and easy, and should be emulated.

x

Trust in AI beats speed

A fast answer isn't helpful if it can't be verified, because confident hallucinations can mislead studying. The tool should prioritize accuracy with built-in fact-checking or clear grounding, even if responses take longer, and support quick cross-checking.

CONTENTS OF THIS TEMPLATE
